

Villa Marina Arcade

PROJECT: Villa Marina Arcade, Isle of Man

CLIENT: Isle of Man tourism department

DESIGNER: Ellis Brown Architects

LAMPING: 56 x 3W Osram Dragon Puck LED

METAL FINISH: Polished aluminium

PANELS: Glass-effect acrylic

DIAMETER: 6000 mm

PROJECTION: 3775 mm

HEIGHT: 225 mm + suspension

The stunning semi-circular state-of-the-art contemporary canopy pendant was a major engineering challenge. Restricted by weight and safety issues, the finished luminaire was carefully constructed from glass-effect acrylic and lightweight aluminium. Suspended on invisible steel safety wires which are micro-adjustable, the canopy is lit with LEDs fixed into the metalwork which shine up and down onto self adhesive diffusing squares on the glazed sections. The LED power supply was specially constructed and housed within two boxes located at either end of the fitting, minimising any visual wiring. Within the box office, the circle is visually completed by a mirror image of downlighters recessed into the ceiling.
