

Wind Star by Windstar Cruises, Interiors by McVitty Interior Consultants and Trimline Interiors

Over the last 65 years, Chelsom has successfully designed and created quality decorative lighting for hotels, cruise ships and commercial contracts worldwide. The multi-million pound UK-based business currently exports products to 70 countries, and is respected by interior designers, hotel groups, cruise operators and contractors.

## Chelsom's worldwide success

Chelsom's reputation has been earned thanks to the aesthetics of its lighting, its design and technical skills and its thorough understanding of decorative contract lighting requirements.

Supported by a staff of 50 at its head office and factory, Chelsom's international sales team attends client and on-site meetings, promoting the lighting range through its 300-page catalogue – which is now fully available online.

Having worked in the overseas markets for many years, the technical team offers expert advice in all international wiring and electrical regulatory standards. Likewise, the operations team is able to handle all export freight requirements, including direct shipments from the subsidiary company, Chelsom Hong Kong, to reduce shipping costs and lead times.

Chelsom's in-house design team works closely with interior designers from around the world to help bring their design concepts to life using a state-of-the-art, three-dimensional drawing package. Whether for a small-scale bathroom wall light or a large lobby chandelier, the Chelsom design team can add depth and character to a preliminary sketch to help visualise a bespoke design before samples are manufactured.

Chelsom has the skills and experience to enhance a wide range of interior projects, from two-star to six-star hotels and cruise liners. The company is able to produce standard and custom lighting for properties all over the globe.
